

```
> visitData <- read.csv("E:\\DAP\\daily-numbers.csv", header=T)
```

```
>
```

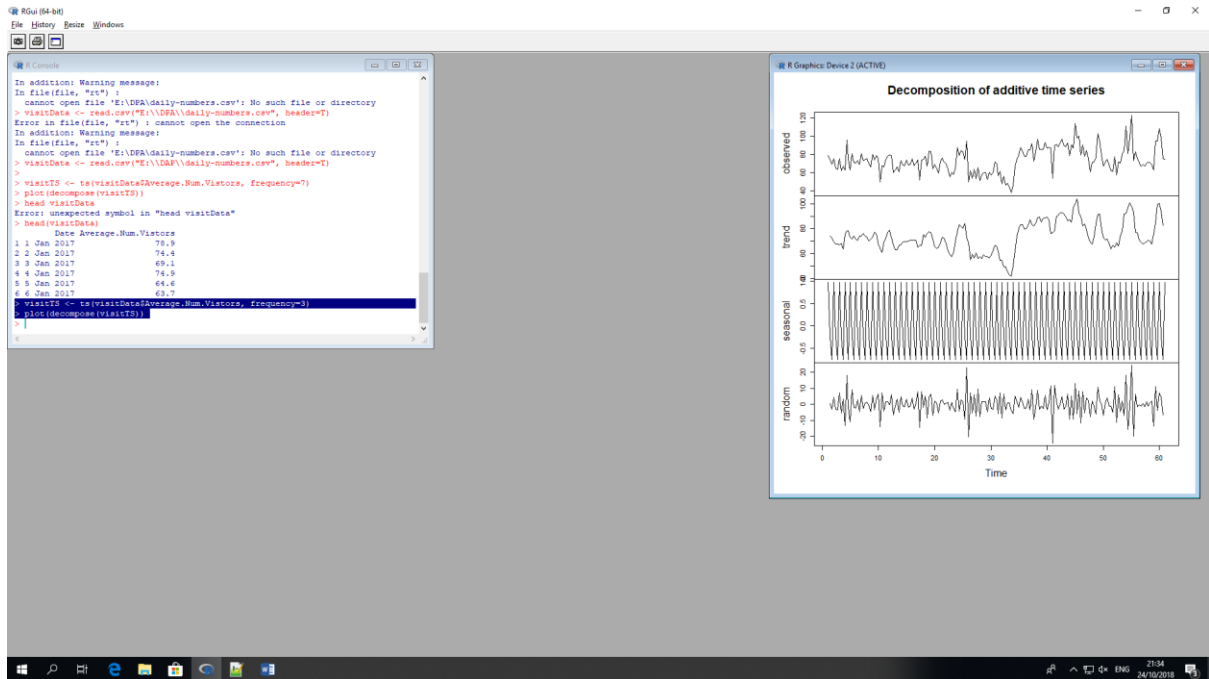

```
> visitTS <- ts(visitData$Average.Num.Visitors, frequency=7)
```

```
> plot(decompose(visitTS))
```

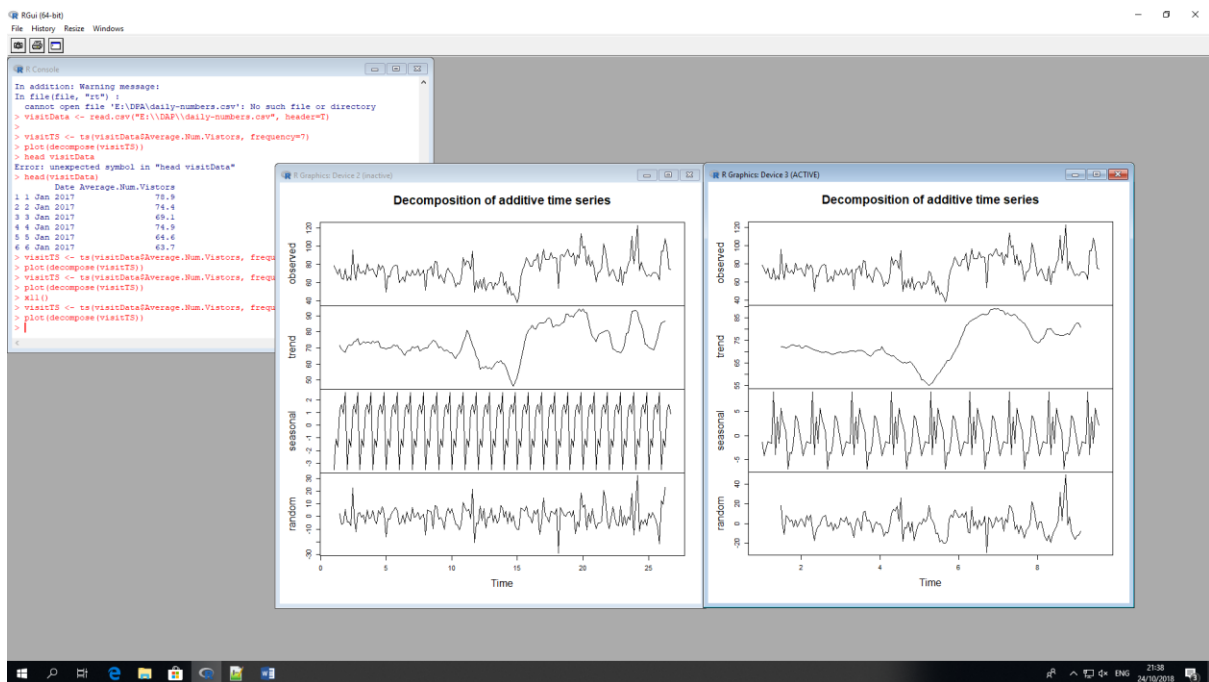

```
> visitTS <- ts(visitData$Average.Num.Visitors, frequency=3)
```

```
> plot(decompose(visitTS))
```

Comparing at 21 days – shows smoother trend

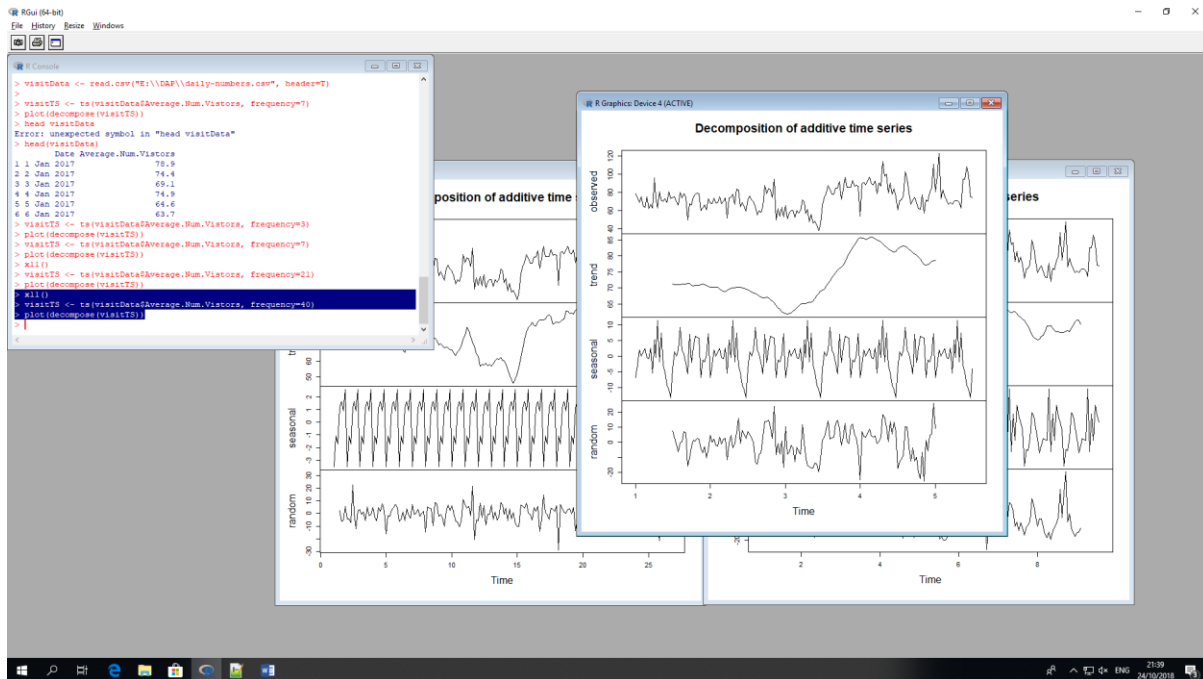

Look at 40 days – loose precision of analysis if too wide range

```
> x11()
```

```
> visitTS <- ts(visitData$Average.Num.Visitors, frequency=40)
```

```
> plot(decompose(visitTS))
```

monthly-sales-for-a-souvenir-shop Time Series check

```
> monthlySales <- read.csv("E:\\DAP\\monthly-sales-for-a-souvenir-shop.csv", header=T)
```

```
> x11()
```

```
> plot(decompose(monthlySales))
```

Error in decompose(monthlySales) :

time series has no or less than 2 periods

```
> <- ts(visitData$Average.Num.Visitors, frequency=31)
```

Error: unexpected assignment in "<-"

```
> head(monthlySales)
```
